PROFESSIONAL SUMMARY

Backend-focused Software Engineering student skilled in Python, Django/DRF, PostgreSQL, and REST API development, with production experience in Docker, Kubernetes, CI/CD, and GitOps deployment pipelines. Shipped end-to-end systems spanning real-time web apps, distributed task processing, web scraping, and ML-powered platforms. Seeking a Backend Developer, DevOps, or AI Intern role to apply strong analytical and software engineering skills.

EDUCATION

Bachelor of Science in Software Engineering

CGPA: 3.68/4.00

The Islamia University of Bahawalpur

6th Semester

Relevant focus: machine learning, backend development, REST APIs, databases, and software engineering fundamentals.

SELECTED PROJECTS

E-Commerce Scraper Engine - Real-Time Price Tracking & Alerts

Django 5 | DRF | React 19 | PostgreSQL | Redis | Celery | Channels | Playwright | Docker | Kubernetes | Helm | ArgoCD | GitHub Actions | Prometheus | Grafana

Built a **production-grade scraper** that tracks dynamic e-commerce prices with Playwright/BeautifulSoup, running four-hour Celery Beat scans and visualizing trends via React and Recharts, secured with JWT auth and real-time Django Channels alerts. **Automated full CI/CD and GitOps delivery** with GitHub Actions (tests, Docker builds, Trivy scans) and **ArgoCD on Kubernetes** via a Helm umbrella chart, instrumented with Prometheus/Grafana monitoring and ArgoCD Notifications.

ShortIQ - URL Shortener with Real-Time Analytics

Django | DRF | Redis | Celery | PostgreSQL | Docker Compose | JWT

Architected a containerized URL shortener with JWT-secured REST APIs, Redis caching, and asynchronous Celery workers. Delivered click analytics (device, browser, geo breakdowns, CSV/PDF export) achieving **under 200ms** response times and **10k+ concurrent-user** capacity via Docker Compose.

AI Resume Analyzer - Full-Stack SaaS Platform

Django | DRF | React 19 | PostgreSQL | Google Gemini | scikit-learn | PyMuPDF | Docker

Built an **ATS optimization platform** combining TF-IDF cosine similarity scoring with Gemini-powered suggestions, PDF ingestion, and matched/missing keyword detection, deployed as decoupled Docker containers with PostgreSQL persistence and a token-refresh retry queue in React Axios interceptors.

Bank Customer Churn Prediction

Python | pandas | scikit-learn | XGBoost | SMOTE | Matplotlib

Built an end-to-end ML pipeline with SMOTE class balancing and ColumnTransformer feature engineering, tuning an XGBoost classifier to **86.71% test accuracy** and **0.85 ROC-AUC** with a 1.41% train-test gap.

Blood Donation Management System

Django | Python | HTML | Oracle | Full-Stack Web Application

Developed a full-stack Django app for donor registration, blood-group filtering, and request tracking, with admin management, Django ORM models, template rendering, and role-based access control.

Heart Failure Prediction

Python | scikit-learn | pandas | Classification | Feature Engineering | Model Evaluation

Built binary classification models on structured healthcare data with feature engineering and hyperparameter tuning, benchmarked via precision, recall, F1-score, and ROC-AUC to identify reliable diagnostic signals.

Real-Time Financial Anomaly Detection

Python | scikit-learn | Isolation Forest | PCA | Streamlit | pandas

Built an unsupervised Isolation Forest pipeline to flag fraud across **284,807 transactions (492 frauds)** without labeled training, applying RobustScaler and PCA for 2D visualization and shipping a real-time Streamlit dashboard for live inference.

EXPERIENCE

Backend Developer Intern	6 months
Enigmatix, Bahawalpur	On-site
- Reduced manual processing time by 30% by engineering 5+ Django REST API modules and CRUD systems for business workflows using Python, SQLite, and Oracle. - Improved database query performance by 25% by designing and optimizing Django ORM models, enhancing backend data reliability and response speed. - Cut post-deployment defects by 20% by leading systematic API debugging and enforcing Git/GitHub version-control best practices. - Designed and maintained database models to support scalable backend features and cleaner application logic.	

TECHNICAL SKILLS

Programming	Python, SQL
Machine Learning	scikit-learn, XGBoost, regression, classification, SMOTE, model evaluation, feature engineering
Data Analysis	pandas, NumPy, Matplotlib, EDA, data cleaning, feature engineering
Backend	Django, Django REST Framework, REST APIs, Django Channels, JWT, CRUD, SQLite, Oracle, PostgreSQL
Web Scraping	BeautifulSoup, Playwright, dynamic-page extraction, scheduled price tracking
Frontend	React 19, Vite, TailwindCSS, Axios, React Router, Recharts
DevOps / Tools	Docker, Docker Compose, Kubernetes, Helm, ArgoCD, GitHub Actions, Prometheus, Grafana, Redis, Celery, Git, GitHub, Gunicorn

CERTIFICATIONS

- Machine Learning with Python (IBM) - Data Analysis with Python (IBM) - Statistics for Data Science with Python (IBM)	- Exploratory Data Analysis for Machine Learning (IBM) - Databases and SQL for Data Science (IBM) - AI For Everyone (DeepLearning.AI)
